

DIGGER RESOURCES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
TWELVE MONTHS ENDED JULY 31, 2012 AND 2011

[October 22, 2012]

**DIGGER RESOURCES INC.
MANAGEMENT DISCUSSION AND ANALYSIS
FOURTH QUARTER ENDED JULY 31, 2012**

This Management’s Discussion and Analysis (“MD&A”) is intended to provide the reader with a better understanding of the activities of Digger Resources Inc. (“Digger or the Company”) and its key financial results. In particular, it explains changes in the Company’s financial position and operating results for the fourth quarter and twelve (12) month period ended July 31, 2012 by comparing it with the results for corresponding period of the previous year.

As explained in note 3 of the audited consolidated financial statements for the year ended July 31, 2012, Canadian generally accepted accounting principles (“GAAP”), previously used to prepare the consolidated financial statements, was replaced with International Financial Reporting Standards (“IFRS”) as at August 1, 2010. Thus the Company’s consolidated financial statements for the fiscal year ended July 31, 2012 present the information to be provided and the necessary explanations pertaining to the first adoption of IFRS.

This MD&A has been prepared in accordance with *National Instrument 51-102, Continuous Disclosure Obligations*, and should be read in conjunction with the information included in the audited consolidated financial statements and accompanying notes for the fiscal year ended July 31, 2012.

These audited consolidated financial statements and this MD&A have been reviewed by the Audit Committee and approved by the Company’s Board of Directors. Unless otherwise indicated all the amounts in this MD&A are in Canadian dollars. The MD&A was prepared as at October 22, 2012 and these documents, along with additional information about the Company, are available at www.diggerresources.com and www.sedar.com.

Forward Looking Statements

Except for historical information, the MD&A may contain forward-looking statements. Forward-looking statements can be identified by terms such as “should”, “expects”, “anticipates”, “predicts”, “undertakes” and other similar terms and expressions. These statements are based on the information available at the time they were prepared and management’s good faith assumptions and expectations regarding future events, and inherently involve known and unknown risks and uncertainties such as, but not limited to, competition, the Company’s ability to build its technology, the Company’s ability to develop its marketing network and enter into new commercial agreements in the oil and gas sector or in Digger’s continuous disclosure filings that may cause the Company’s actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievement expressed or implied by these forward looking statements and as such should not be unduly relied upon. Except as required by law, the Company does not intend, and undertakes no obligation, to update any forward-looking statements to reflect, in particular, new information or future events.

Message To Shareholders

Dear Fellow Shareholders:

I’m pleased to report that efforts to ensure that High Definition Reservoir Geochemistry (“HDRG”) technology was functional at a commercial level, cost effective, robust and reproducible

underscored Digger Resources Inc. (“Digger”) investment thesis in 2011 / 2012:

1. The rapid deployment of the Digger’s HDRG technology and its future growth depends in part on its ability to develop profitable strategic alliances. The licensing agreement with the ALS Laboratory Group (“ALS”) and marketing agreement with ALS Arabia will go a long way in the further development of HDRG and the marketing of that technology. ALS is an internationally diversified testing services organization employing over 6,000 staff in 160 locations and 40 countries with a presence on every continent, offering a broad range of analytical services to leading global companies, governments and academic institutions. ALS has introduced Digger and HDRG to a number of its clients in the Middle East and in Australia. It is anticipated that this contact will result in HDRG sample jobs.
2. In 2011 / 2012 presentations were made to oil and gas explorers with a view to opening up the use of HDRG to third party oil and gas explorers. An HDRG orientation survey for a fully integrated international petroleum company was completed in November 2011. The goal of the HDRG survey was to template oil and gas accumulations in the area to see if there was a significant geochemical signal at surface that matched the subsurface hydrocarbon distribution. According to fully integrated international petroleum company the HDRG survey matched the subsurface hydrocarbon distribution in all respects and it is anticipated that there will be a follow-up Phase 1 HDRG sampling program that could result in net revenues to Digger in excess of \$500,000.
3. Ensure that Digger is able meet its existing operating costs and commitments. In that regard Digger closed a \$400,000 non-brokered private placement financing in August 2011. The net proceeds from the private placement were used by the Digger for general working capital purposes, to enhance its marketing efforts of its HDRG technology and to pay its debts.

In closing, I want to thank you for your interest and investment in Digger. I think that our track record, the experience of our management and board of directors, our strong insider ownership and the untapped prospects of HDRG technology make a great case for a year of growth and upside potential at Digger.

On behalf of the Board of Directors

Norman B. Yeo, B.A., LL.B.

President and Chief Executive Officer, October 22, 2012

Highlights

As earlier reported effective October 5, 2010 ALS Laboratory Group (“ALS”) granted to Digger an exclusive non-assignable right to market a proprietary ALS partial extraction leachant (the “Leachant”) that is being used by Digger to assist oil and gas explorers in the environmentally sound discovery and development of new oil and natural gas reserves through the detection of metallic and non-metallic ions in near surface soil profiles. ALS has introduced Digger and Digger has presented its HDRG technology to a number of ALS clients in the Middle East and in Australia. In that regard an HDRG orientation survey was conducted for a fully integrated international petroleum company. The HDRG orientation survey consisted of 198 samples and resulted in net revenues to Digger of CDN \$30,690. The goal of this HDRG survey was to template oil and gas accumulations in the area to see if there was a significant geochemical

signal at surface that matched the subsurface hydrocarbon distribution. Digger was advised by the fully integrated international petroleum company that the HDRG survey matched the subsurface hydrocarbon distribution. A proposed follow-up Phase 1 HDRG sampling program of 3,270 samples is under consideration and if the sample program was to go forward this would result in net revenues to Digger of \$500,000.

Digger maintains an active research and development program in conjunction with the Green Dragon Investments Ltd. (“Green Dragon”) ongoing drill testing and validation programs in southwestern Saskatchewan. Continuing work in the Suffield District in southwestern Saskatchewan suggests that the highest HDRG responses at surface appear to be reflecting zones of maximum hydrocarbon accumulation that correspond to structural and stratigraphic traps thereby identifying the optimum target position for a well to be located. As earlier reported Green Dragon drilled its 3-1-14-19W3M vertical well, its 15-36-13-19W3M vertical well and its 1-17-14-18W3M vertical well solely on the basis of an HDRG geochemical anomaly. In all cases drilling intersected a pay zone associated with the Lower Shaunavon sands. The Lower Shaunavon Formation had not previously been an exploration target in this immediate area. Offsetting P&NG rights to these six (6) sections Green Dragon P&NG leases have recently been purchased for plus \$1million dollars a section.

Company Profile

The Company’s principal business activity is, through the application of its HDRG ionic soil technology, the development of an effective exploration technique as an adjunct to existing seismic methods and to assist in the environmentally sound discovery and development of new oil and natural gas reserves through the detection of metallic and non-metallic ions in near surface soil profiles. The Company is a reporting issuer in Alberta and British Columbia and trades on the NEX Board of the TSX Venture Exchange under the ticker symbol “DIG.H”.

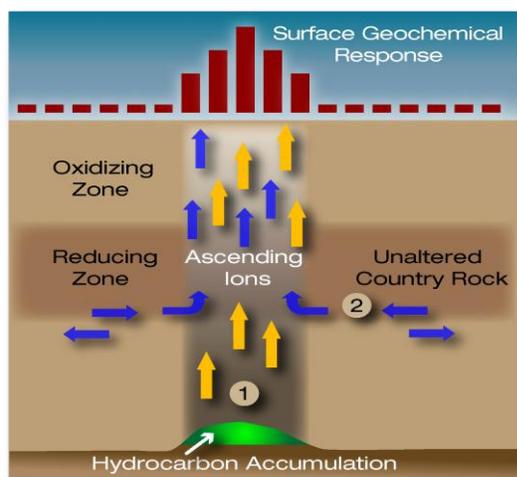

Geophysics, principally seismic techniques, has and will continue to provide the primary methods for discovery of sub-surface oil and gas. Seismic is without peer for high-resolution structural mapping over a depth range measured in kilometers (“km”). It is however not strongly influenced by the presence or absence of petroleum. Surface geochemistry is an additional tool in determining the presence of hydrocarbons at depth. Detection of hydrocarbon accumulations by surface geochemistry has been discussed in a number of publications. The fundamental theory behind using surface geochemistry to indicate the presence of petroleum at depth is not well understood, but is predicated on the empirical observations that hydrocarbons migrate to the surface through seemingly impervious barriers and leave their signatures in soils.

The presence of various metallic and non-metallic ions (geochemical signatures) directly above oil and gas accumulations has been well documented. In the past it has been difficult to measure these anomalies both accurately and with a high degree of repeatability, which has severely hampered its applicability and value for hydrocarbon exploration. HDRG works by detecting metallic and non-metallic ions that form geochemical signatures directly above oil and gas accumulations. The technology is based on the collection and analysis of near soil samples using a proprietary Leachant and ultra low-level inductively coupled plasma analyses. The metallic and non-metallic ion geochemistry employed by Digger is a very different approach to the analysis of metals and non-metals in soils and involves the use of extremely weak chemicals rather than the conventional aggressive acid or fire assay techniques. Conventional techniques digest soils releasing metals that are chemically bound by strong atomic forces, either to each other or to clays and other mineral particles in the soil sample. By contrast the mobile metal ion extractant, Leachant, used by Digger contain chemicals to detach and hold in solution only the metallic/non-

metallic ions that are loosely bound to the soil particles by weak atomic forces. This extractant deliberately avoids dissolving the bound forms of the metals and the metallic/non-metallic ions held in solution represent the chemically active or ‘mobile’ component of each element in a soil sample. These mobile forms occur in very low concentrations that can now be readily measured by modern commercially available inductively coupled plasma mass spectrometry analytical instrumentation. This delivers data with very high precision and accuracy, provided that the solution delivered to the machine is dilute and clean. Digger’s HDRG Leachant meets these criteria particularly well.

The HDRG anomaly is derived a number of sources including anomalous elements from hydrocarbon accumulation migrating toward the surface and migration of country rock elements within a reducing vertical ionic plume or path. By deliberately targeting only the recently arrived or mobile forms of metal and non-metallic elements, prior to chemical binding and dispersion and physical spreading across the landscape, mobile ion geochemistry used by Digger can give both higher resolution and better definition thus presenting a more focused geochemical expression of oil and gas pools. Output for interpretation is typically an index or mathematical function derived from a group elements that quantify specific responses recognized as typifying hydrocarbon accumulation at depth. The key elements groups vary depending on the specific fields being surveyed. A Petroleum Significance Indicator Element Group (“PSI”), representing specific group(s) of elements recognized as characteristic of individual reservoirs, are combined into an index value. Prior to the development of the optimum PSI for a survey area the data is normalized to compensate for land form and regolith, pedogenic processes active at each site, any significant soil chemistry effecting individual element responses and the evidence for ion migration. Once the data has been adjusted for these factors, interpretation can proceed.

Over the last ten (10) plus years Digger has completed upwards of fifteen (15) HDRG orientation surveys over existing oil and gas fields. Found in all cases was a sharp anomaly, over background, residing vertically over the oil and gas accumulations and a completely flat response over the dry wells in the same area. These anomalies were consistent with patterns characteristic with the oil traps discovered in the Green Dragon 4-13-14-19W3M well (“4-13”), the 3-1-14-19W3M well, the 15-36-13-19W3M well and the 1-17-14-18W3M well (“1-17”), all drilled in southwestern Saskatchewan on the basis of an HDRG geochemical anomaly. Since the 4-13 was drilled nine wells have been drilled, based on seismic interpretation, within a one mile radius around the 4-13 and in all cases the wells drilled have been dry holes, marginal producers or uneconomic to produce. The 1-17 well, there was very limited well control in that the nearest producing well to the 1-17 was in excess of 2.4km away, intersected an oil zone in the Roseray Formation with 4.5m of gross well log pay and a second oil zone associated with the Lower Shaunavon Formation with 6m of gross well log pay.

This diagram shows an ionic plume, generated over oil & gas pools, migrating vertically to the surface

Using a proprietary mobile ion leach (HDRG), metallic and non-metallic ions are measured and interpreted to accurately define the anomalies, and thus pinpoint the location of buried oil & gas accumulations at depth.

Target Market

Whilst Digger’s management considers the full market opportunity for HDRG to be suitable for all oil and gas explorers, Digger initially focused on developing oil and gas targets through related company Green Dragon, Green Dragon’s sole director is the wife of a Digger director, that drill-tested HDRG generated anomalies. Because of the reluctance of the oil and gas explorers to accept geochemical applications, as opposed to geophysical solutions, in the search for oil and gas reserves the Company’s focus has been on the validation of its HDRG technology by ensuring that oil wells got drilled solely on the basis of HDRG anomalies as the key performance metric of Digger’s HDRG program. With the successful drilling outcomes HDRG has confirmed its ability to precisely define an anomaly related to hydrocarbon accumulations that, for reasons of reservoir thickness and geological contrast, previous seismic programs were unable to resolve. This has positioned the Company’s HDRG technology as a primary cost effective exploration tool to be used by participating companies for oil and gas exploration. In 2011 / 2012 presentations were made to oil & gas explorers with a view to opening up the use of HDRG to third party oil and gas explorers. Digger’s management is of the view that HDRG technology is now functional at a commercial level, cost effective, robust and reproducible.

Business Model

The Company currently charges oil and gas explorers CDN \$200 per HDRG sample analyzed exclusive of collection and transport to the lab for analyses. DIG then provides an interpretation to the client which involves HDRG ionic de-absorption analysis samples and includes database construction incorporating analyses, coordinates and response ratios and generation of a Petroleum Significance Index. Work in the Suffield District in southwestern Saskatchewan suggests that the highest HDRG responses at surface appear to be reflecting the zones of maximum hydrocarbon accumulation that correspond to stratigraphic and structural traps thereby identifying the optimum target position for a well to be located.

The rapid deployment of the Company’s technology and its future growth depends in part on its ability to develop profitable strategic alliances. The agreement with ALS will assist in the further development of HDRG and the marketing of that technology.

Outlook

The Company will continue to closely monitor its level of cash while targeting a capital structure allowing for the realization of its business plan including the sales and marketing of its HDRG technology. By increasing its visibility and brand awareness through its association with ALS, Digger believes that all of its business will eventually experience sustained growth.

The Company closed a non-brokered private placement financing in August 2011 and the gross proceeds from the private placement were used by the Company to strengthen the corporate balance sheet, to enhance the Company’s marketing efforts of its HDRG technology, to re-pay unsecured advances to related parties and for general working purposes. The Company’s financing has provided Digger with sufficient capital resources to ensure the continuity of its operations over the next twelve (12) months whilst the Company attempts to secure future HDRG sampling contracts.

Financial Data

The following table presents consolidated financial data for the current and two previous years:

Selected Annual Information			
Information from the Consolidated Statements of Operations and Deficit	Year ended July 31	Year ended July 31	Year ended July 31
	2012	2011	2010
Revenues & Other Income	70,974	124,800	10,000
Net Income (Loss) and comprehensive loss	6,620	34,174	(50,967)
Income(Loss) per share – basic and diluted	0.001	0.004	(0.005)
Information from the Consolidated Statements of Cash Flows			
Cash flows relating to operating activities	(14,795)	59,698	(46,008)
Information from the Consolidated Balance Sheet			
Cash equivalents and short term investments	129,603	59,933	533
Working Capital (Deficiency)	103,511	(301,542)	(339,809)
Total Assets	132,199	60,887	5,653
Long term debt, including current portion	Nil	Nil	Nil
Total liabilities	26,300	361,608	340,548
Shareholder's equity (Deficiency)	105,899	(300,721)	(334,895)

The following table presents selected significant financial data for the most recent quarter and the corresponding period of the previous fiscal year.

Information from the Consolidated Statements of Operations and Deficit	Fourth Quarter Ended July 31	Fourth Quarter Ended July 31	Twelve month period ended July 31	Twelve month period ended July 31
	2012	2011	2012	2011
Revenues & Other Income	-	690	70,974	124,800
Net Income (Loss) and comprehensive loss	(29,779)	(43,003)	6,620	34,174
Income (Loss) per share – basic and diluted	(0.002)	(0.004)	0.001	0.004
Information from the Consolidated Statements of Cash Flows

Operating Results

Revenues

Revenues and Other Income for the fiscal year ended July 31, 2012 were \$70,974 compared to \$124,800 for the corresponding period last year. Revenues for the fourth quarter ended July 31, 2012 were \$ Nil compared to \$690 for the corresponding period last year.

Over the last number of years Digger has focused its efforts on developing oil and gas targets through related company Green Dragon that could be drill-tested in the short term solely on the basis of HDRG generated anomalies and the development of a second generation HDRG leach that had the capacity to distinguish between multiple zones and single zones of hydrocarbon potential. This strategy in 2009 and into 2010 resulted in minimal revenues because of the decision by Digger to limit the marketing of HDRG surveys to third party oil and gas explorers whilst trying to validate HDRG through the drill bit via Green Dragon’s drilling program at Suffield in Saskatchewan. In 2010, 2011 and 2012 presentations were made to oil and gas explorers with a view to opening up the use of HDRG to third party oil and gas operators. An HDRG orientation survey for a fully integrated international petroleum company was completed in November 2011. The HDRG orientation survey consisted of 198 samples and resulted in net revenues to Digger of CDN \$30,690. The goal of this HDRG survey was to template oil and gas accumulations in the area to see if there was a robust geochemical signal at surface that matched the subsurface hydrocarbon distribution. Digger was advised by the fully integrated international petroleum company that the HDRG survey matched the subsurface hydrocarbon distribution. A significant 2012 follow-up HDRG survey is currently under consideration by the fully integrated international petroleum company. Digger’s management is confident that Digger’s strategy and initiatives in regards to the development of HDRG will favourably impact the Company’s future growth and revenues.

Operating Expenses

For the fourth quarter of the 2012 fiscal year, ended July 31, 2012, expenses amounted to \$29,779 compared to \$43,693 for the corresponding period last year as set out hereunder:

	Q4 Fiscal 2012	Q4Fiscal 2011	12 month period 2012	12 month period 2011
	\$	\$	\$	\$
EXPENSES				
Stock based compensation costs				
Laboratory analysis	-	-	-	26,794
License fees	-	10,491	-	10,491
Office and administrative	3,239	4,425	20,293	17,137
Professional fees	26,301	27,615	43,105	32,111
Depreciation and Amortization	239	1,162	956	4,093
	29,779	43,693	64,354	90,626

General Administrative

Office and administrative expenses and professional fees consisted of costs of general administrative expenses and costs related to operating as a publicly traded company including the non-recurring fees associated with the Company’s obligation to apply the IFRS standards retrospectively to establish the IFRS balance sheet as at August 1, 2010.

Share-based Compensation

Share based compensation for the period ended July 31, 2012 was \$Nil as compared to \$Nil for the same period in 2011. This was as a result of the issuance of no new options in 2011 and 2012.

Share-based compensation represents a non-cash charge resulting from applying the fair value method on stock options issued. Under this method, compensation expense related to these programs is recorded in the statement of operations over their respective vesting periods.

Depreciation

The Company’s corporate assets were near fully depreciated as at July 31, 2012 and as such depreciation for the period ended July 31, 2012 was \$956 as compared to \$4,093 for the comparative period ended July 31, 2011.

Bad Debt Expense

The Company did not record a bad debt expense for the quarter ended July 31, 2012 or the comparative period ended July 31, 2011.

Net Income (Loss) and Comprehensive Income (Loss)

For the twelve-month period ended July 31, 2012, net income and comprehensive income amounted to \$6,620 (\$0.001 per share) compared to \$34,174 (\$0.004 per share) for the same twelve-month period last year. For the fourth quarter of the 2012 fiscal year, net loss amounted to \$29,779 (\$0.002 loss per share) compared with a loss of \$43,003 (\$0.004 loss per share) for the fourth quarter of the 2011 fiscal year.

Liquidity and Capital Resources

As at July 31, 2012 total assets amounted to \$132,199, compared to \$60,887 as at July 31, 2011. This was primarily due to the closing of a non-brokered private placement in August 2011.

Working capital stood at \$103,511 as at July 31, 2012 compared with a deficiency of (\$301,542) as at July 31, 2011. Cash and cash equivalents totaled \$129,603 as at July 31, 2012, compared with \$59,933 as at July 31, 2011, and consisted of funds on deposit with a bank and these funds were readily accessible by the Company.

For the fiscal year ended July 31, 2012, net cash flows provided by financing activities amounted to \$400,000 as a result of the issuance of shares. Digger closed a non-brokered private placement in August 2011 by issuing 2,000,000 common share units at a price of CDN \$0.20 per unit for gross proceeds of CD \$400,000. Each unit consisted of one common share of Digger and one common share purchase warrant, each warrant entitling the holder to purchase one common share of Digger at an exercise price of CDN \$0.26 per share until February 13, 2013. The gross proceeds from the private placement were used by the Company to strengthen the corporate balance sheet, to enhance the Company’s marketing efforts of its HDRG technology, to re-pay unsecured advances to related parties and for general working purposes. The proceeds from this placement provided the Company with sufficient capital resources for the next twelve (12) months whilst the Company attempts to secure future HDRG sampling contracts. The Company has no material capital expenditure commitments for Fiscal 2013.

Equity amounted to \$105,899 as at July 31, 2012, compared with a Shareholders’ Deficiency of (\$300,721) as at July 31, 2011.

To ensure the continuity of its operations, the Company will have to secure future HDRG sampling contracts, financing and related party funding. There can be no assurance that Digger will be successful in its financing efforts or in securing future HDRG sampling contracts. The Company’s liquidity objective is to maintain the capacity to fund development of and market its technology and repay liabilities in a timely and cost-effective manner. The Company’s financing provided Digger with sufficient capital resources to ensure the continuity of its operations over the next twelve (12) months whilst the Company attempts to secure future HDRG sampling contracts.

Quarterly Operating Data

Operating results for each of the past eight quarters are presented in the table below. The Company adopted IFRS on August 1, 2011 with an effective application date of August 1, 2010. This means that comparative figures of the 2012 and 2011 fiscal year are presented in accordance to IFRS. Our unaudited quarterly consolidated financial statements have not been reviewed by our independent auditors.

	2012			2011			2010	
	Q4(IFRS)	Q3(IFRS)	Q2(IFRS)	Q1(IFRS)	Q4(IFRS)	Q3(IFRS)	Q2(IFRS)	Q1(IFRS)
Revenues & Other Income	-	19,302	30,690	20,982	690		124,110	
Net Income(loss) and comprehensive results	(29,779)	14,036	8,049	14,314	(43,003)	(6,785)	87,424	(3,462)
Per share – basic and diluted	(0.002)	0.001	0.001	0.001	(0.004)	(0.001)	(0.009)	(0.001)
Weighted average number of common shares outstanding	11,283,285	10,779,035	10,552,610	9,649,035	9,349,035	9,349,035	9,349,035	9,349,035

This MD&A presents financial information by fiscal quarters.

Account Receivables

Historically the Company has not had material issues with respect to the collections of receivables. As the Company grows, management will standardize the credit policies and manage the increased activity.

Insurance and Risk Management

Digger attempts to minimize and transfer risk wherever possible. Where appropriate, the Company adopts the policy of insuring its risks.

Products and Technologies

A HDRG extractant solution in an ALS analytical laboratory is applied to soil samples to release elements absorbed to the soils. These absorbed elements are the keys to better locate of oil and gas deposits. Using the HDRG proprietary Leachant Digger routinely defines 58 elements, Isotopes, H+ concentration, Mass susceptibility, Electrical Conductivity that are measured. This

data is normalized creating Anomaly to Background (“Response Ratios”) for each data set. Response Ratios for all data is benchmarked against existing well control or historical data. The result is a strong multi-element surface geochemical anomaly developed over hydrocarbon accumulations. The ability to detect coincident, multi species anomalies with very high ‘signal to noise’ ratios that are reproducible over time, places HDRG in a unique position as an exciting exploration tool for new oil and gas reserves. Digger will continue to seek to develop and exploit its proprietary HDRG technology.

Related Party Transactions

The Company’s related parties consist of directors and officers and companies controlled by directors and officers of the Company.

Advances from affiliated companies in the amount of \$Nil (July 31, 2011 - \$248,012) are non-interest bearing and are owing to companies owned by a Director of Digger, who indicated that these amounts would not be paid in the next twelve months unless additional funding was realized through HDRG sampling surveys or a financing. Revenue includes sales of Nil (July 31, 2011 – \$Nil) to a company controlled by a director of Digger.

Non-IFRS Measurements

In this MD&A, the Company’s management uses a measure that is not compliant with IFRS. This measure, gross profit excluding amortization, supplies useful and complementary information to, among other things, assess the Corporation’s financial performance, but does not have a standardized meaning under IFRS. Moreover, this measure is not likely to be comparable to similar measures used by other issuers.

Management believes EBITDA (Earnings Before Interest, Income Taxes, Depreciation and Amortization) to be an important measure as it excludes the effects of items, which primarily reflect the impact of long-term investment decisions, rather than the performance of the Company’s day-to-day operations. EBITDA was \$7,576 for the year ending July 31, 2012 compared to \$38,267 in the year ending July 31, 2011. The adjusted EBITDA designates the net income before items not affecting cash, the foreign exchange gain or loss, financial expenses and interest income and income taxes. This measure supplies useful and complementary information which allows amongst others to evaluate profitability and cash flows provided by operations.

The following table explains the reconciliation of the adjusted EBITDA to the net income.

	2012	2011
Net Income	6,620	34,174
Amortization of property and equipment	956	4,093
Amortization of intangible assets		
Amortization of other assets		
Share-based payment expense		
Foreign exchange loss (gain)		
Financial results (financial expenses and interest income)		
Income taxes		
Adjusted EBITA	7,576	38,267

Contractual Obligation

Effective October 5, 2010 ALS granted to Digger an exclusive non-assignable right to market a proprietary ALS partial extraction leachant. Digger is obliged pay to ALS an ongoing licensing fee of AUD \$10 per sample analyzed for exclusivity of use for the leachant and to use ALS as its sole analytical service provider. The term of the agreement with ALS is for three years with two renewable terms thereafter of five years each based on successful achievement of performance objectives as follows:

- a) In the last full year of the first three year license term no less than 5,000 samples are delivered by Digger to ALS for analysis using a partial leach analytical technique;
- b) In the last full year of the first five year renewal period no less than 20,000 samples are delivered by Digger to ALS for analysis using a partial leach analytical technique.

October 5, 2012 through to October 4, 2013	5,000 samples to be delivered to ALS for analysis to extend license agreement for 5 years to October 4, 2018.
October 5, 2017 through to October 4, 2018	20,000 samples to be delivered to ALS for analysis to extend license agreement 5 years to October 4, 2023.

Effective June 24, 2011 the agreement with ALS was amended pursuant to an addendum which provides that for HDRG work that is sourced in the Arabian Peninsula that ALS Arabia, a joint venture between ALS and Maamel (a Saudi Corporation), will serve as the prime contractor for work in the Arabian Peninsula and Digger will serve as its subcontractor.

Off Balance Sheet Arrangements

The Company does not currently utilize any off balance sheet arrangements to enhance liquidity and capital positions of Digger or for any other purpose.

Subsequent Events

Pursuant to its Stock Option Plan Digger granted to certain directors and officers of the Company incentive stock options to purchase up to an aggregate of 950,000 common shares in the capital stock of the Company. The options are exercisable at a price of \$0.15 per share and vesting in six (6) equal tranches: three (3), six (6), nine (9), twelve (12), fifteen (15) and eighteen (18) months, for a term of five (5) years from the date of the September 21, 2012 grant.

Digger received approval from the TSX Venture Exchange to extend the term of 2,000,000 share purchase warrants (the "Warrants") which were set to expire on August 12, 2012 by six months. The Warrants were issued as part of a private placement completed by the Company on August 12, 2011. Each Warrant is exercisable into one Common Share of the Company at \$0.26 per share. The new expiry date of the Warrants is February 13, 2013. All other terms of the Warrants remain unchanged.

Proposed Transactions

An HDRG orientation survey was conducted for a fully integrated international petroleum company. The HDRG orientation survey consisted of 198 samples, was completed in late 2011 and resulted in net revenues to Digger of CDN \$30,690. The goal of this HDRG survey was to template oil and gas accumulations in the area to see if there was a significant geochemical signal at surface that matched the subsurface hydrocarbon distribution. Digger was advised by the fully integrated international petroleum company that the HDRG survey matched the subsurface hydrocarbon distribution. A proposed follow-up Phase 1 HDRG sampling program of 3,270 samples is under consideration and if the sample program should go forward this would result in net revenues to Digger of approximately CDN \$500,000.

Disclosure Controls And Procedures And Internal Control Over Financial Reporting

Recent changes in securities laws no longer require the CEO and CFO of TSX Venture Exchange listed companies such as the Company to certify they have designed internal control over financial reporting, or caused it to be designed under their supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards ("IFRS"). Instead, an optional form of certification has been made available to TSX Venture Exchange listed companies and is being used by the Company's certifying officers. The new certification reflects what the Company considers to be a more appropriate level of CEO and CFO certification given the size and nature of the Company's operations. This certification requires that the certifying officers state:

- i) they have reviewed the annual MD&A and financial statements;
- ii) they have determined that there is no untrue statement of a material fact, or any omission of material fact required to be stated which would make any statement not misleading in light of the circumstances under which it was made within the interim MD&A and financial statements;
- iii) that based upon their knowledge, the annual filings, together with the other financial information included in the annual filings, fairly present in all material respects the financial condition, results of operations and cash flows of the Company as of the date and for the periods presented in the filings.

For purposes of this certification, management believes fair presentation in accordance with IFRS constitutes fair presentation under securities laws.

Shareholders' Equity (Deficiency) and Outstanding Share Data

As at July 31, 2012 Digger had a shareholders' equity of \$105,899 compared with a shareholder's deficiency of (\$300,721) at July 31, 2011.

The Company's common shares trade on the NEX board of the TSX Venture Exchange (DIG.H) and as at July 31, 2012 the Company had 11,349,035 (11,349,035 at October 22, 2012) fully issued and outstanding common shares.

The following common share stock options and share purchase warrants are issued and outstanding:

- As at July 31, 2012, a total of Nil common share stock options were outstanding to

directors and officers under the Company's Share Option Plan (950,000 at October 22, 2012 were outstanding to directors and officers under the Company's Share Option Plan with an exercise price of \$0.15 per share and with an expiration date of September 21, 2017).

- As at July 31, 2012 a total of 2,000,000 share purchase warrants (2,000,000 at October 22, 2012), each warrant entitling the holder to purchase one common share of Digger at an exercise price of CDN \$0.26 per share until February 13, 2013, were outstanding.

Investor Relations Activities

The Company did not engage any outside consultants to provide investor relations activities for the twelve months ended July 31, 2012.

Recent Accounting Developments

The Company adopted IFRS on August 1, 2011. The financial data regarding the fiscal year ended July 31, 2011 has accordingly been restated. The adoption of IFRS has not had a material impact on the Corporation's operations, strategic decisions or internal controls. The Company is obligated to apply the IFRS standards retrospectively to establish the IFRS opening balance sheet as at August 1, 2010. However, IFRS offers a number of mandatory exceptions and optional exemptions with respect to these general guidelines of retrospective application (refer to note 17 of the unaudited interim condensed consolidated financial statements for the first quarter ended October 31, 2011 for further details on the Company's choices in regards to the exemptions and adjustments resulting from the transition to IFRS).

New Accounting Pronouncements

The Company did not opt for early adoption of the following new standards, whose impact, upon their adoption, on the consolidated financial statements has not yet been determined:

New Standard Anticipated	Changes to Current Standards
IFRS 9, Financial Instruments	
<i>(effective for fiscal years beginning on or after January 1, 2013 with earlier adoption permitted)</i>	
	IFRS 9 simplifies the measurement and classification for financial assets by reducing the number of measurement categories and removing complex rule-driven embedded derivative guidance in IAS 39, Financial Instruments – Recognition and Measurement.
	The new standard also provides for a fair value option in the designation of a non-derivative financial liability and its related classification and measurement.
IFRS 10, Consolidated Financial Statements	
<i>(effective for fiscal years beginning on or after January 1, 2013 with earlier adoption permitted)</i>	
	IFRS 10 replaces SIC-12, Consolidation – Special Purpose Entities, and parts of IAS 27, Consolidated and Separate Financial Statements, and provides additional guidance regarding the concept of control as the determining factor in whether an entity should be included within the consolidated financial statements of the parent company.

IFRS 12, Disclosure of Interests in Other Entities	
<i>(effective for fiscal years beginning on or after January 1, 2013 with earlier adoption permitted)</i>	
	IFRS 12 is a new and comprehensive standard on disclosure requirements for all forms of interests in other entities, including joint arrangements, associates, special purpose and other entities.
IFRS 13, Fair value measurements	
<i>(effective for fiscal years beginning on or after January 1, 2013 with earlier adoption permitted)</i>	
	IFRS 13 is a new standard which sets out in a single IFRS a framework for measuring fair value and requires disclosures about fair value measurements. IFRS 13 does not determine when an asset, a liability or an entity's own equity instrument are measured at fair value. Rather, the measurement and disclosure requirements of IFRS 13 apply when another IFRS requires or permits the item to be measured at fair value (with limited exceptions).

In addition to the above:

IAS 27 'Separate Financial Statements' replaces the current version of IAS 27 'Consolidated and Separate Financial Statements' as a result of the issue of IFRS 10. This revised standard is effective for periods beginning on or after 1 January 2013. The Directors are assessing the possible impact of this standard on the Company's Financial Statements.

Amendments to IAS 32 'Financial Instruments: Presentation' add application guidance to address inconsistencies identified in applying some of the criteria when offsetting financial assets and financial liabilities. This includes clarifying the meaning of 'currently has a legally enforceable right of set-off' and that some gross settlement systems may be considered equivalent to net settlement. This standard is effective for annual periods beginning on or after 1 January 2014.

Critical Accounting Estimates

The Company's accounting policies are described in Note 5 in audited consolidated financial statements for the fiscal year ended July 31, 2012. Certain of these policies involve critical accounting estimates as they require management to make particularly subjective or complex judgments about matters that are inherently uncertain and because of the likelihood that materially different amounts could be reported under different conditions or using different assumptions. Significant areas requiring the use of management estimates include, but are not limited to, the valuation of share-based compensation transactions, the valuation of purchase warrants issued on financings, deferred income tax assets and liabilities and accrued liabilities and contingencies. The uncertainties related to these areas could significantly impact the Company's results of operations, financial condition and cash flows.

Going Concern Uncertainty

The annual audited consolidated financial statements have been prepared in accordance with IFRS on a going concern basis, which contemplates the realization of assets and payments of liabilities in the ordinary course of business. However, the use of such principles may not be appropriate because there is a significant doubt surrounding the ability of the Company to continue as a going concern as the Company has a negative cash flow from operations as at July 31, 2012 and has historically financed its operations through the use of funds obtained from related parties (see Note 2 to the financial statements – Going concern assumption).

The Company is still looking for external markets for its HDRG technology. Management is confident that by the end of 2013 the Company will see advancement in the use of HDRG technology and that Digger will be able to raise funds through increased HDRG surveys on a fee for service basis and obtain additional equity financing to further develop and market its HDRG technology to vendors. While there can be no assurance that these initiatives will be successful, management believes that future contracts and management and related party funding will contribute adequate cash flow.

These financial statements do not reflect any adjustments to the carrying value of assets, liabilities and reported revenue and expenses that might be necessary should the Company be unable to generate the necessary capital and continue as a going concern. Such adjustments may be material.

The materialization of any of the following risks may have an impact on the activities of the Company and a negative impact on its financial position and operating results. In that event, the price of the Company's common shares may decrease. As noted above the financial statements have been prepared on a going concern basis certain adverse conditions and the events detailed hereunder could cast doubt on the validity of this assumption:

Additional Financing

To the extent that external sources of capital, including the issuance of additional common shares become limited or unavailable the Company's ability to make necessary capital investments to maintain and develop its HDRG technology and meet its obligations will be impaired. Digger closed a non-brokered private placement in August 2011 by issuing 2,000,000 common share units at a price of CDN \$0.20 per unit for gross proceeds of CD \$400,000. Each unit consists of one common share of Digger and one common share purchase warrant, each warrant entitling the holder to purchase one common share of Digger at an exercise price of CDN \$0.26 per share until February 13, 2013. The gross proceeds from the private placement were used by the Company to strengthen the corporate balance sheet, to enhance the Company's marketing efforts of its HDRG technology, to re-pay unsecured advances to related parties and for general working purposes.

Competing Technologies

The market for Digger's HDRG technology is still emerging and growth and demand for, and acceptance of HDRG by oil and gas explorers remains uncertain. In addition, other emerging technologies may impact the viability of the market for HDRG. Digger's success will depend on its ability to keep pace with technological and marketplace change and to introduce, on a timely and cost effective basis HDRG surveys that will satisfy potential customer requirements and achieve market acceptance.

Dependence on Key Personnel

The Company has a small management team and the loss of a key individual or the inability to attract qualified personnel in the future could materially and adversely affect Digger's business.

Strategic Alliances

The rapid deployment of the Company's technology and its future growth depend in part on its ability to develop profitable strategic alliances. Failure by Digger to develop such strategic alliances could adversely affect its business activities, revenues, financial position and operating results.

Distribution Network

Growth in Digger's business depends in large part on its ability to develop well targeted marketing and distribution channels, increase its number of points of sale and attract new customers in both North America and worldwide. Failure by the Company to do so could adversely affect its business activities, revenues, financial position and operating results.

The following assessment of significant accounting policies and associated estimates is not meant to be exhaustive. The Company might realize different results from the application of new accounting standards promulgated, from time to time, by various rule-making bodies.

Future income taxes

The company uses the asset and liability method of recording income taxes. This method recognizes the future income tax inflows and outflows that will result whenever the carrying amount of an asset or liability is recovered or settled.

Stock-based compensation plan

Options granted under the share option plan are accounted for using the fair-value method. Under this method, the fair-value of stock options granted is measured at estimated fair-value at the grant date and recognized over the vesting period. Consideration received on the exercise of stock options is recorded as share capital and the related contributed surplus on options granted is transferred to share capital.

Purchase Warrants

The fair value of purchase warrants, issued in conjunction with common share financings, is measured at date of issue using the Black Scholes valuation model and recognized as a decrease in capital stock and an increase in contributed surplus on the Consolidated Statement of Financial Position. The initial fair value of the purchase warrants is subsequently revalued each reporting date using current assumptions in the Black Scholes valuation model, with any change reported recognized as an adjustment in capital stock and contributed surplus on the Consolidated Statement of Financial Position.

Contingencies

By their nature, contingencies will only be resolved when one or more future events occur or fail to occur. The assessment of contingencies inherently involves the exercise of significant judgment and estimates of the outcome of future events.

Financial Instruments And Other Instruments

The Company's financial risk management goals are to ensure that the outcome of activities involving elements of risk are consistent with the company's objectives and risk tolerance, while maintaining an appropriate risk/reward balance and protecting the Company's consolidated balance sheet from events that have the potential to materially impair its financial strength. Balancing risk and reward is achieved through identifying risk appropriately, aligning risk with overall exploration and development strategy, diversifying risk, mitigation through preventive controls, and transferring risk to third parties.

Fair Value

The carrying values for primary financial instruments, including Cash and equivalents, Other receivables, and Accounts payable and accrued liabilities approximate fair values due to their short-term maturities. The Company's exposure to potential loss from financial instruments relates primarily to its cash and equivalents held with Canadian financial institutions.

There have been no major or significant changes that have had an impact on the overall risk assessment of the Company during the period. The objectives and strategy for the exploration and evaluation asset portfolio remains unchanged.

The Company's activities expose it to the following financial risks:

Credit Risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

The Company's exposure to credit risk is concentrated in two specific areas: the credit risk on operating balances including Other receivables, primarily comprised of GST recoverable, and Cash and equivalents held with Canadian financial institutions. The maximum exposure to credit risk is equal to the carrying values of these financial assets.

The aggregate gross credit risk exposure at July 31, 2012 was \$129,811 (July 31, 2011 - \$60,066), and was comprised of \$208 (July 31, 2011 - \$133) of GST recoverable and \$129,603 (July 31, 2011 - \$59,933) in Cash and equivalents held with a Canadian financial institution with a "AA" credit rating.

Market Risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices, such as foreign currency exchange rates, interest rates and liquidity. A discussion of the Company's primary market risk exposures, and how those exposures are currently managed, follows:

Currency Risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

The Company's financial assets and liabilities and operating costs are principally denominated in Canadian dollars.

Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Company's interest rate risk is minimal as there are no outstanding loans or interest-bearing debts. The Company has not entered into any interest rate swaps or other active interest rate management programs at this time.

Liquidity Risk

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities. The purpose of liquidity management is to ensure that there will be sufficient cash to meet all financial commitments and working capital obligations as they become due. To manage cash flow requirements, the Company maintains principally all its assets in cash and equivalents.

Sensitivity Analysis

The Company believes that the movements in investments held for trading that are reasonably

possible over the next twelve-month period will not have a significant impact on the Company. The Company believes that its cash position and short-term investments provide adequate liquidity to meet all of the Company's near-term obligations.
